Definition of grades

ACS grade : Materials conforming with the specifications and procedures outlined in American Chemical society specifications

AG : Analytical Grade. Designates reagents suitable for use in analytical procedures.

BG : Biotechnology Grade. Materials equivalent to Ultra Pure, but particularly suitable for use in Molecular biology applications. Tested for specific contaminants such as nucleases and bacteria where appropriate.

Certified/certifiable grade. Materials, typically dyes and stains, that meet the requirements of the biological stain commission. Certified reagents have been tested and validated by biological stain commission.

HPG : High Purity grade. Materials of superior quality where there are no publishing standard

PG : Proteomics Grade. Materials conforming to the requirements of protein research which are tested to be nuclease, DNase and/or Protease free where applicable. Appropriate for use in Proteomics research applications.

RG : Reagent Grade. High Purity materials which suits most standard labs applications.

UPG : Ultra Pure grade. Material with a purity level exceeding the various monograph grades

USP Grade. Materials conforming with the specifications and procedures outlined in the United States Pharmacopeia
