

Comparison of Protein Assays

Uptima BC Assay #UP40840A versus 2 competitors

Protein assays, all based on bicinchoninic acid method, were compared according to a standard protocol in microplate, with a same standard protein, Bovine Albumin #UP36859A.

Conclusion :

Uptima kit gives excellent results in sensitivity and linearity.

Remarks: Other characteristics of Uptima BC Assay are very similar or even better.

-For example, all tested substances (over 30) were found compatible in the very similar extend (not shown here) as expected from the fact the assays are based on the same chemical reaction.

-Uptima offers 2 sizes of kits (1L and 250ml of reagent) for each need. The packaging is more economical and convenient (albumin in screwed autostable microtubes).
